Location: Perth, WA, Australia

Github: <https://github.com/lbp003>

PROFESSIONAL SUMMARY

Self-motivated full-stack software engineer with 7+ years of experience designing and building scalable web applications using PHP (Zend, Laravel, Symfony), JavaScript (React, Vue, Next.js), and relational databases (MySQL, PostgreSQL). Strong background in RESTful API design, performance optimisation, and asynchronous processing using RabbitMQ and JMeter. Experienced in spec-driven development and AI-assisted engineering, leveraging tools such as Claude for requirements analysis and clarification, along with modern AI tools for code quality, refactoring, and design validation. Comfortable working across the full SDLC in Agile teams, collaborating closely with stakeholders, and delivering reliable solutions across education, e-commerce, healthcare, and HR domains.

KEY SKILLS

Backend: PHP (Zend, Laravel, Symfony), RESTful APIs, OrangeHRM, RabbitMQ

Frontend: JavaScript, React.js, Vue.js, Next.js, jQuery, Bootstrap, HTML5, CSS

Databases: MySQL, PostgreSQL

DevOps & Tools: Docker, AWS, GCP, GitLab, GitHub, Bitbucket, SonarCloud, JMeter, JIRA

AI Tools: Claude, CodeRabbit AI, Google Antigravity, Spec-driven development using AI agents

Practices: Agile/Scrum, code reviews, unit & functional testing, performance testing

PROFESSIONAL EXPERIENCE

Freelance Software Engineer – Perth, WA, Australia

July 2025 – Present

- Designing and developing a scalable wedding management platform for real-world customers, covering admins, customers, and vendors.
- Built authentication and role-based access using Laravel Breeze (API) and Next.js.
- Implemented backend APIs using Laravel and frontend features using React / Next.js.
- Focused on performance, maintainability, and clean architecture for long-term scalability.
- Leveraged AI-assisted development tools to accelerate delivery while maintaining high code quality:
 - Google Antigravity for research, refactoring insights, and architectural validation
 - CodeRabbit AI for automated pull request reviews and code-quality checks

Software Engineer – Eyepax IT Consulting (Pvt) Ltd, Colombo, Sri Lanka

January 2022 – June 2025

- Worked primarily as a backend engineer on a workload and performance management system used by over 30 universities in the UK.
- Designed and implemented backend modules using Symfony API Platform and integrated with a React.js frontend.
- Performed functional and unit testing, peer code reviews, and merge request approvals to maintain high code quality.
- Used RabbitMQ for asynchronous processing and JMeter for API performance testing and optimisation.
- Collaborated directly with clients through regular meetings, clarifying requirements and ensuring alignment with business goals.

Software Engineer – hSenid Business Solutions, Colombo, Sri Lanka

December 2020 – January 2022

- Contributed to enhancements and maintenance of HR and payroll solutions built on the OrangeHRM framework.
- Participated in planning and R&D; activities for migrating legacy data and systems to modernised architectures.
- Collaborated with government stakeholders (ICTA Sri Lanka) to ensure compliance with security and regulatory standards.

Software Engineer – Fexcon (Pvt) Ltd, Colombo, Sri Lanka

May 2018 – November 2020

- Developed and maintained web applications for clients in e-commerce, safety compliance, and specialist engineering domains.
- Implemented backend features using PHP (Zend Framework, Laravel) and MySQL, and built responsive UIs using Bootstrap and jQuery.
- Integrated secure payment gateways for multiple platforms, ensuring smooth and reliable payment flows.
- Worked closely with cross-functional teams to gather requirements, plan releases, and resolve production issues.

SELECTED PROJECTS

Simitive (WAMS) – Workload & Performance Management System (Eyepax)

Backend-focused role using Symfony API Platform, React.js, GitLab, JMeter, and RabbitMQ. Responsible for module design, implementation, automated tests, and deployments for a system adopted by 30+ UK universities.

Ministry of Finance (Payroll) – Government Payroll Revamp (hSenid)

Worked on revamping an existing government payroll system using the OrangeHRM framework (PHP Symfony, Vue.js). Contributed to implementing new requirements and modern UI design, supported R&D; for legacy data migration, and collaborated with ICTA Sri Lanka to ensure compliance with security protocols and government standards.

SafetyTask – Health & Safety Compliance Platform (Fexcon)

Implemented front-end features with Bootstrap and jQuery and backend modules in PHP and MySQL. Integrated payment gateways and improved workflows for organisations managing workplace safety requirements.

PEWeldBank – PE Pipe Welding Data & Assessment Platform (Fexcon)

Contributed to system and database design as well as implementation using PHP Zend Framework, MySQL, and Bootstrap. Supported data logging, tutorials, and welding assessment features with subscription payments.

MediSeek – Telemedicine Platform (Fexcon)

Participated in design and development of a telemedicine solution using Laravel, Bootstrap, jQuery, and MySQL to support remote doctor consultations during the COVID-19 pandemic.

Wishque – E-commerce Platform (Fexcon)

Contributed to the development and maintenance of an online shopping platform using PHP, Bootstrap, jQuery, and MySQL. Implemented front-end features, optimized backend functionality, and integrated payment gateways to ensure seamless and secure transactions.

Track My Journey – Freelance GPS Tracking App Backend

Implemented backend using Laravel and MySQL with a Bootstrap/jQuery frontend, deployed on Google Cloud Platform (GCP). Collaborated closely with the client on requirements, system design, and release planning.

Ceylon Weddings - Wedding Management Platform (<https://ceylonweddings.com>)

Architected and developed a scalable wedding management platform using a decoupled, API-first architecture. The backend is implemented with Laravel, exposing secure RESTful APIs consumed by a Next.js/React frontend. Authentication and authorization are implemented through role-based access control to support distinct admin, customer, and vendor workflows. The platform is currently live in production and supports core wedding planning and vendor coordination workflows. Development focuses on maintainability, performance, and clean architecture practices, leveraging AI-assisted engineering tools including Claude Code and OpenAI Codex for feature development and refactoring, along with CodeRabbit AI for automated pull request reviews and code quality analysis.

EDUCATION

BIT – Bachelor of Information Technology University of Colombo School of Computing (UCSC), Sri Lanka – 2016 – 2019

INTERESTS

Travel, Football, Cyber Security, Astronomy
